

Software Change Management Policy

This policy defines the process for requesting, reviewing, and approving changes to production software systems. It applies to all engineering teams within the organization.

Roles and Responsibilities

Role	Name	Responsibility
Approving Authority	Dr. Elena Vasquez	Reviews and signs off on every change request before it reaches production.
Change Requestor	Marcus Chen	Submits the change request with a description of scope and risk.
Technical Reviewer	Priya Natarajan	Verifies the change against the technical review checklist.

Procedure

A change request is submitted, reviewed by the Technical Reviewer, and then escalated to the Approving Authority for final sign-off. Emergency changes may bypass the standard review window but must be retroactively approved within 48 hours.
